TESTIMONIALS

 **David Spencer – Five Star Google Review**

CHEMRON EFFLORESCENCE REMOVING SOLUTION: Great result removing 20 years of efflorescence off ceramic tiles. Clear instructions to follow gave results beyond expectations. Together with the company's TILE CLEAN the whole area came up looking great.

DIRECTIONS

Dilution: 1 part to 20 parts water.

1. Remove any loose contamination. Use a pressure washer where applicable.
2. Apply using a brush or sprayer. For vertical surfaces work from the bottom up.
3. Agitate with a brush to remove any stubborn soiling.
4. Allow to dwell for 1 to 2 minutes, but do not allow to dry.
5. Thoroughly rinse the treated surfaces with a mixture of solvent and water to remove all traces of acid.
6. Repeat steps 2 to 5 if required.

Note:

- May dull high gloss surfaces such as natural stone and porcelain.
- Recommend testing in an inconspicuous area first on these types of surfaces or if using stronger solutions on any surfaces.
