\$26.00 ex GST (\$28.60 inc GST)

High-quality microfibre mitten large enough for all hand sizes. Single internal finger division to aid grip and comfort.

Container Type: Mitten

SKU: MIC

Chemron

PRODUCT DESCRIPTION

- Large size 18 cm x 23 cm
- Use with or without washing gel and liquids
- Optimal for cleaning alloys, stainless steel, rubber, glass, plastic

Microfibre Mittens are made of a high-quality blend of 80% polyester and 20% polyamide fibers, finer than a human hair. These wedge-like fibres absorb, trap and remove dust, grease, severe contamination and dirt faster and easier than most traditional cleaning cloths and sponges. Microfibres can also absorb 7 times their weight in water, more than twice as much as ordinary cotton. They offer faster drying times than cotton, as their larger surface area allows water to evaporate more quickly.

Ideal for use with our **Vitroglaze**, a permanent coating that prevents the adhesion and build-up of contaminants on glass surfaces.
