PRODUCT DESCRIPTION

Insectaguard Solvent Based is an outdoor insect repellent designed to establish a strong insect barrier and assists in an overall insect control strategy.

Implementing a dissuasion strategy with an outdoor insect repellent

We all know that insects are a crucial part of our environment. Many ecosystems depend upon their activity; pollination for plants, a food source for birds etc. However in the wrong place or at the wrong time, they can be more than just a nuisance, they can cause costly contamination and health issues for both people and livestock.

Using an outdoor insect repellent is part of an insect dissuasion strategy. It firmly informs the insects that this is not an area they should enter, or linger.

Nobody wants to unnecessarily kill insects, however, a current infestation will need to be treated prior to implementing a dissuasion strategy with an outdoor insect repellent like Insectaguard. To treat a current outdoor problem we recommend you use [Insakill Solvent Based](#)

A highly effective, yet low toxicity outdoor insect repellent

Although Insectaguard is a highly effective insect deterrent, its low toxicity formula won't accumulate in the environment and won't have any residual activity in warm-blooded animals and humans.

An important note about insect immunity

Just like bacterial can develop an immunity to antibiotics, so insects can develop an immunity to a repeatedly used treatment.

Insectaguard comes in two formulas, solvent-based and [water-based](#). Alternating treatment between these formulations can inhibit an insects ability to develop immunity and help to ensure the ongoing effectiveness of the outdoor insect repellent strategy.

For indoor use please consider our [Insectaguard Water Based](#). It is a non-flammable, pleasantly fragranced, water-based formula, and is ideal for indoor applications.

Product Features:

- Earth-friendly pest control that is safe for the outdoor environment
- Non-aerosol formulation
- Excellent economy: 3 months protection
- Suitable for use in AQIS-inspected meat and food processing plants
- No pest controller's certificate required

Chemron

Ideal for:

- Cockroaches
- Silverfish
- Fleas
- Weevils
- Spiders
- Ants
- Moths
- Mosquitoes
- Flies

RELATED PEST CONTROL PRODUCTS:

- For a current active pest infestation consider using [Insakill Solvent-Based](#) or [Insakill Water-Based](#).
- For a persistent flying insect problem like flies and mosquitos consider using [Sentinel](#) with an [Automatic Dispensing Unit](#).
- For wasp nests, particularly around electricity, consider using [Wasp Eliminator](#).
- For bird-related problems, [click here](#).

DIRECTIONS FOR USE

Dilutions: Dilution is not required.

1. Use a spray applicator or professional-grade fogger to apply 25ml per square metre to hard surfaces in areas where pests are, have been, or are likely to be.
2. After use, rinse the spray applicator or fogger thoroughly.
3. Repeat treatment every three months.
