

Fire Retardant Liquid

Fire Resistant Coating

Introducing our Fire Retardant Liquid, a premium solution designed to enhance the fire resistance of timber. Proudly Australian-made and designed for Australian conditions, this treatment acts as a protective barrier, inhibiting the initial spread of fire by isolating the combustible material from direct flames.

Once our Fire Retardant Liquid is fully dry, the timber surface can be stained, sealed, or painted with a variety of water-based and oil-based products.

Why It's Superior to Fireproof Paint Alone

While fireproof paint has its merits, it can weather and flake over time, potentially exposing underlying timbers to fire hazards. Such flaking often occurs in hard-to-see areas, like those near the roof. To ensure comprehensive protection, it's recommended to treat timbers with our Fire Retardant Liquid before considering any paint application.

Preserving the Beauty of Natural Timber

A standout feature of our Fire Retardant Liquid is its ability to retain the natural hue of timber. Treated internal timber panelling will maintain its authentic wood appearance while benefiting from enhanced fire resistance.

For optimal results on older or oxidized timbers, consider pre-cleaning the surface with our Revive Timber Cleaner

Directions for Use:

Coverage: One litre will cover 6 to 9 square metres depending upon material porosity.

1. Mix product thoroughly before use.
2. Ensure the surface is clean, dry and free from oil and dust.
3. Lightly sand the timber surface as you would before applying a paint primer.
4. Apply by brush, or preferably a low-pressure sprayer.
5. Apply the second coat before the first coat is dry – within 30 minutes.
6. Before the second coat dries, wipe excess product off with a lint-free cloth.
7. Allow seven hours to fully dry – may take longer in colder conditions.
8. For external application, overcoat product with weather-resistant topcoat.

Clean up: Clean up using water and detergent.

Note: If the timber to be treated is aged or oxidised it can be cleaned and prepared with Timber Reviver Cleaner. This

Features:

- Premium timber fire resistance treatment
- Effectively reduces the risk and severity of fires
- Provides added time for firefighting efforts, reducing potential damage
- Dries clear, preserving the timber's natural appearance
- Offers resistance against fungi and UV rays
- Easy application process

Pack sizes:

1L • 5L • 15L
