

Stainless Steel Sentry Aerosol

Stainless Steel Coating

Stainless Steel Sentry is an advanced formula for the protection of stainless steel against rust and corrosion.

This advanced stainless steel coating microscopically coats the surface of stainless steel, leaving a lightly polished finish. This finish will last for several months, depending on prevailing conditions.

Stainless Steel Sentry's lasting protective film will shield the stainless steel from atmospheric corrosion that causes unsightly tea staining and rusting.

Applications:

- Railings
- Balustrading
- Yacht railings
- Architectural panels
- Lighting posts
- BBQs
- Grab rails
- Sculptures

Directions for Use:

Preparation

To get the best stainless steel protection it is important that the surface is cleaned and prepared. We recommend you use our Stainless Steel Rejuvenating Paste or, for larger areas, consider Stainless Steel Cleaner.

1. Make sure contaminants have been completely removed and the surface is dry.
 2. Apply product directly to the surface using a sprayer and polish in with a microfibre cloth.
- For smaller surfaces, spray onto a microfibre cloth and polish into the surface.

Stainless Steel Sentry is being applied after the surface has been cleaned with Stainless Steel Rejuvenating Paste

Features:

- Microscopically coats and protects cleaned surfaces for several months
- Protection from atmospheric corrosion, tea staining, rusting etc.

Pack sizes:

6x 200gm Aerosol Cans
